ALMA HYBRID IS THE FIRST AND ONLY DEVICE OF ITS KIND TO COMBINE THREE POWERFUL ENERGY SOURCES TO DELIVER UNPARALLELED RESULTS WITH MINIMAL DOWNTIME.

With limitless options and control that extends beyond standard fractional laser alone, Alma Hybrid™ allows you to determine every aspect of treatment – for a completely new, never before-seen concept in skin rejuvenation and scar treatment.

Designed for endless options of ablative, non-ablative and thermal treatments for skin rejuvenation and scar revision, Alma Hybrid creates a unique synergistic effect by combining the power of three core energies:

- CO₂ laser – an optimal blend of ablative, coagulative and thermal effects for efficient, highly precise focused or fractional laser treatments
- 1570nm laser – a powerful non-ablative modulated fiber laser,

which creates a thermal effect that promotes new dermis synthesis while leaving the epidermis intact

- **IMPACT** for Trans Epidermal Delivery – Alma's patented ultrasound technology, which uses acoustic pressure to deliver pharmaceuticals and cosmeceuticals trans-epidermally to achieve enhanced results.

At the heart of the Alma Hybrid platform is HyGrid™, Alma's novel hybrid applicator, which facilitates a customised skin-program matrix for any desired combination of ablation vs non-ablation ratio within the treated area. HyGrid enables practitioners to meet each and every patient's specific treatment needs, as well as the desired balance between results timeline and downtime. **AMP**

What practitioners are saying about Alma Hybrid

Dr Natasha Cook
Dermatologist

The Alma Hybrid has a long list of tremendous benefits compared with other lasers in its category. It is the first laser to combine both ablative fractionated CO₂ and non-ablative 1570 erbium delivered simultaneously.

It's highly effective and offers superior results whilst less painful and with less downtime than comparative devices. Each treatment can be designed based on skin type and amount of downtime.

On top of this, it has a unique ultrasonic handpiece for laser-assisted drug delivery that is pioneering. We now use this for melasma, keloid and surgical scars to enhance topical drug absorption.

Patients have been extremely impressed and delighted with the results – they feel it is less painful and are amazed at the degree of improvement in a single session to treat acne scars, surgical scars and skin rejuvenation.

Alma Hybrid has become my go-to for skin rejuvenation, acne scars and surgical scars.

Prof Greg Goodman AM
Dermatologist

Alma Hybrid is easy to use, offering relatively quick treatments with good patient satisfaction. The ability to alter many parameters to maximise outcomes is impressive, and the sonophoresis and laser-assisted drug delivery allows for greater efficacy from the machine and better results.

My patients have been very happy to return for repeat treatments. The procedure itself is well tolerated and the recovery and downtime are very patient-friendly.

“ALMA HYBRID HAS BECOME MY GO-TO FOR SKIN REJUVENATION, ACNE SCARS AND SURGICAL SCARS.”

Dr Davin Lim
Dermatologist

The Hybrid is the future of lasers, combining two wavelengths in the one device: CO₂, the gold standard in collagen remodelling; and a non-ablative wavelength that can penetrate to the deeper levels of skin, whilst still preserving the upper layers of skin which allows for faster recovery.

Alma Hybrid offers custom delivery of laser wavelengths, power and density, allowing for thousands of variations and enabling the operator to tune the laser for each patient. It also has presets, enabling fast acquisition of treatment parameters if so required.

Patient feedback has been nothing short of excellent. The Hybrid is next-level laser resurfacing, The speed of laser delivery, comfort levels and, importantly, results have made this laser one of the most utilised devices for both myself, other dermatologists, and our clinical team of nurses.

• Onset as early as 24 hours
• Results seen from 2-3 days
• More than 30 years of safety data

Dr Saleem Loghdey
Dermatologist

In my practice and over the course of my career, I have used a lot of CO₂ laser systems. The Alma Hybrid has really caught my attention because of the mixed, or hybrid, technology using both ablative and non-ablative lasers and ultrasound to enhance transcutaneous drug delivery.

The Alma Hybrid is a very well-designed machine, easy to use, very economical and has an intuitive and streamlined clinical workflow. It has multiple modalities on a single system, making it very easy to treat patients for rejuvenation and all types of scars on the one platform.

All my patients are looking for an effective treatment with the shortest downtime and the Alma Hybrid gives you that. It also allows the treatment to be customised to each individual for maximal results.

I believe this is the most advanced ablative and non-ablative laser available on the market. If you want to treat scarring or target rejuvenation, this laser makes the most sense.

For more information on Alma Hybrid or Alma Academy, contact Alma Lasers Australia on 02 8339 4791 or visit alma-lasers.com.au

“THE ALMA HYBRID HAS REALLY CAUGHT MY ATTENTION BECAUSE OF THE MIXED, OR HYBRID, TECHNOLOGY USING BOTH ABLATIVE AND NON-ABLATIVE LASERS AND ULTRASOUND TO ENHANCE TRANSCUTANEOUS DRUG DELIVERY.” – Dr Saleem Loghdey
